SNOWMAN22 V2

Precisely Crafted Surface
Double Layered Shade
Soft Dimming Light
Color Temperature Conversion
Candle Mode
Timer Function
Integrated LED
Heat Dissipation System
Magnet Attachment

SNOWMAN22 V2 uses newly re-designed components using more sophisticated manufacturing methods and provides various functions with the latest developed Controller One & double layered Integrated LED module. Using exactly the same sliding part adopted in high-end audio products, the new soft dimming function moves with delicate precision. 5 Color temperature modes that reflect the changes of sunlight from morning to sunset and shimmering candlelight can be switched with a light touch control, and the 3 step timer mode can be activated by touching for 2 seconds. The magnet hidden on the back of the switch allows you to attach the switch wherever you want by using with the 'I'm here' steel chip provided. The heat dissipation structure applied to the diffuser ensures efficient use of integrated LED and prevents severe damage to LED module due to heat accumulated for a long time.
